Mediscreen

Report-service

Name: get patient report by patient id

URL: /assess/{patientId}

Method: GET

URL Parameters: patientId (patient id)

Data Parameters: none

Response (Success):
{
  "riskLevel": "Borderline",
  "finalResult": "Patient: Piers Bailey 64 years(year) old, gender: Male, address: 1202 Bumble Dr, phone number: 747-815-0557. The diabetes test result is - Borderline."
}

Response (Failure):
{
  "statusCode": 404,
  "message": "Report creation unsuccessful. Patient with ID 55 not found."
}
Sample Call: GET http://localhost:8073/assess/2

Notes: This endpoint handles the GET request to get patient report specified by patient ID. The patient identifier is specified in the URL. The response returns a Report object.
